## **MOST IMPORTANT HOW TO GET YOUR PROFILES INDEXED!**

First, it's better not to make any post if you plan to stuff many back links in your profile. If you only plan to link a couple websites only you can post, your profile won't trigger moderators alarms bells.

Now, how to index your profiles fast and with minimum work.

This is how I do it, I can create around 400 back links from articles to around 100 profiles, average 4 articles pointing to 1 profile in around 10 minutes of work.

First write an article or, if you are lazy, get a PLR article (here is a free 26,900 PLR Articles pack) :

<http://www.imguru.biz/internet-marketing-downloads/view.download/7/25.html>

In resource box write something like :

```
Author <a
href="{profilelink1|profilelink2|.....|profilelink100}">SOMENAME</a
> is an expert on ..... , if you want to read more please visit us at
<another link>
```

So you have 1 link to 1 profile and 1 link to whatever other webpage you want.

With the article submitter I use I can create 800-1000 accounts and activate them (at article directories) and submit (average) to 450-600 article directories (not all have categories for every niche) the same article spinned in a unique variation. You profile1...profile100 links will be distributed evenly.

It takes around 5 minutes creation+activation and 5 minutes for posting article (effective human work, rest of the time the submitter runs minimized to tray).

Usually, in 1 week, I have around 400 live articles with 800 back links, from which 400 back links to my profiles, for 10 minutes of work.

Here is the article submitter I use, with included rewriter :

Have fun and make money!
